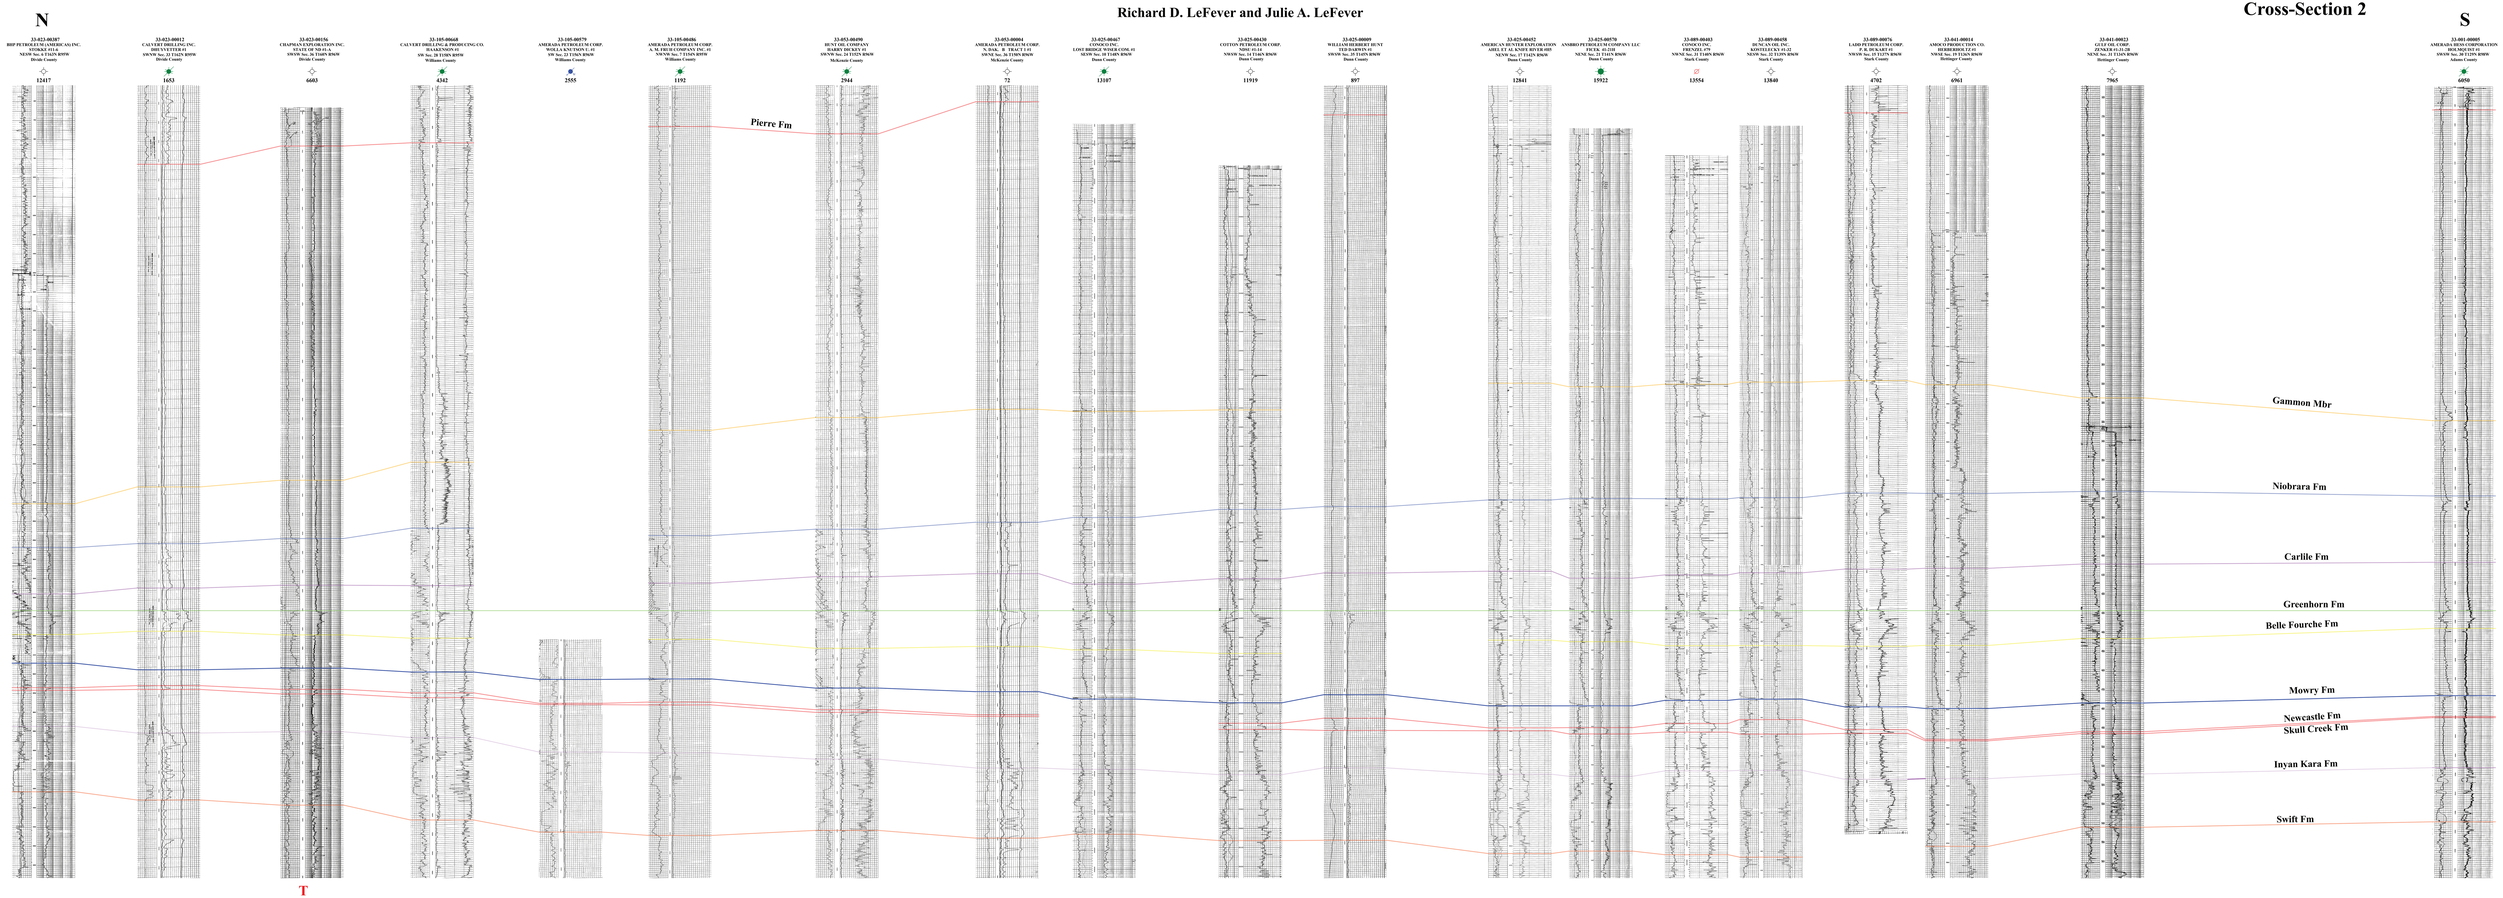
Preliminary Cross-Sections of Cretaceous Strata in North Dakota

Richard D. LeFever and Julie A. LeFever

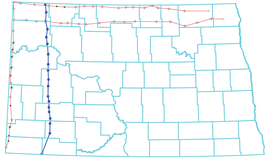
Report of Investigations No. 107

Cross-Section 2



T

10 mi



These are stratigraphic cross-sections of Cretaceous strata in the most heavily drilled parts of North Dakota. Additional cross-sections in future publications will expand coverage to include the entire state. For specific sheet the lithologies of individual formations or their written log characteristics, please refer to North Dakota Geological Survey Report of Investigation 106, *Reference Logs for Cretaceous Formations in North Dakota*.

Datum is top of the Greenhorn Formation
