of forward thinking counties (e.g., Ward, McKenzie, Mercer, Dunn and Williams) partnered with the State Water Commission to complete collections for their areas. The US NRCS office in Bismarck was able to procure funding to essentially finish collections along the Missouri Coteau and the vast majority of the south-west corner of the state. FEMA has also contributed resources to finish the collection of data in Williams and Stark counties. We would like to acknowledge these organizations and the dedicated individuals involved with the collection of this vast and detailed dataset across the State of North Dakota.

The North Dakota State Water Commission is further acknowledged for providing the state-wide dissemination LiDAR map service (http://lidar.swc.nd.gov/) which stores the extremely large volume of LiDAR data thus enabling the Geological Survey to generate this map.
