SHALLOW GAS FIELD SCREENING IN THE MOHALL 100K SHEET, NORTH DAKOTA

1:100,000 scale map of shallow gas ground-water observation well field screening results for the Mohall 30' x 60' quadrangle, North Dakota.

100k Mhll-gs, 1:100,000

The North Dakota Geological Survey has recently completed an investigation into the occurrence of natural gas in shallow ground-water observation wells in Bottineau and Renville Counties, North Dakota. Over 100 well sites were reviewed and visited during the investigation. Each existing observation well was field screened with a flame-ionization detector (FID) for the presence of methane. The locations of the existing observation wells in place within the Mohall 30' x 60' Quadrangle are depicted along with the associated FID instrument response.
